Earthquake Preparedness

North America
East Asia
Southeast Asia

North America

Look around places where you spend time. Identify safe place such as under a sturdy piece of furniture or against an interior wall in your home, office or school so that when the shaking starts, you Drop to the ground, Cover your head and neck with your arms, and if a safer place is nearby, crawl to it and Hold On.

When the shaking stops, look around. If there is a clear path to safety, leave the building and go to an open space away from damaged areas.
